Subject: RE: Possum Point S107 data

Amelia,

Just following-up to our phone conversation, I keep a copy of the S107's 2003 Analytical sheet and Section of the 2008 VPDES application in my RAW folder's SWPPP file. Should be the last pdf in the SWPPP file. I think the 2003 S107 data was collect for the VPDES reissuance at that time, which should have been coordinated by Bob Williams. We took that data and compared to the surrounding Groundwater wells' data and looked for similar characteristics. Meaning, same detection of parameters and similar concentration levels. Hope this helps!

Best Regards,

Rick Woolard

Subject: Possum Point S107 data

Hey Rick,

As a follow up to my voicemail...

The only analytical data or evidence of a “study” related to S107 I have found is where we provided analytical data in the 2033 VPDES application. At that time we requested that the General Stormwater Permit be terminated and that S107 (at that time referred to as the ‘delta drain’) be incorporated into the VPDES permit.

I see language repeated in the SWPPP and subsequent applications that indicates that the S107 was determined to be predominantly groundwater. Do you know if we did anything beyond the analysis provided with the 2003 application? In other applications it looks like we sampled only S5, S61, and S42.

Any input you can provide would be appreciated.

Thanks,

Amelia Boschen
